

ABSTRACT

The present invention concerns an apparatus for mounting an appliance to a support surface. The invention includes a first base and a second base. The first base includes a chamber and at least one keyway aperture. The second base is sized to substantially cover the chamber and the at least one keyway. Also include on the second base is at least one locking member. The locking member is positioned on the second base to releasably engage the keyway to interlock the bases together.
